

THE SAFETY PROGRAM SCORECARD

How Does Your Safety Program Stack Up?

A 25-point self-assessment structured around OSHA's three Safe + Sound core elements. Grab a coffee, grab a pen, and find out where your program shines and where it's quietly leaking risk.

HOW TO USE THIS SCORECARD:

Score each item honestly. Nobody's grading you but you (and possibly OSHA, but let's not think about that part yet).

SCORING KEY FOR EVERY ITEM:

- ☒ 1 point = In place
- ☐ 0 points = Not in place

These score ranges are editorial guidance developed for this scorecard; they are not OSHA ratings or validated compliance benchmarks. A high score does not establish compliance with applicable safety and health requirements or confirm that all workplace hazards are controlled.

01

SECTION 1: MANAGEMENT LEADERSHIP (9 POINTS POSSIBLE)

Leadership sets the tone. If safety starts and stops with a poster in the breakroom, this section will show it.

- ☐ 1. Senior leadership visibly and regularly communicates that safety is a core value, not a side project.
- ☐ 2. Safety goals are written into company-wide business objectives, not siloed in a separate binder.
- ☐ 3. Managers and supervisors are held accountable for safety performance in their own reviews.
- ☐ 4. Adequate budget is allocated for safety training, equipment, and program upkeep.
- ☐ 5. Leaders participate in safety walks, audits, or committee meetings themselves.
- ☐ 6. There is a clear, written safety policy that employees can actually find and read.
- ☐ 7. Indicators such as hazard reports, inspection completion, corrective-action closure, and training, and relevant outcome data are reviewed at the leadership level.
- ☐ 8. Employees see leadership respond to safety concerns with action, not just acknowledgment.
- ☐ 9. Safety is a standing agenda item in leadership meetings, not an afterthought when something goes wrong.

SCORE

/ 9

02

SECTION 2: WORKER PARTICIPATION (8 POINTS POSSIBLE)

A safety program without worker buy-in is just a policy nobody follows.

- ☐ 1. Employees have a clear, accessible way to report hazards without fear of blowback.
- ☐ 2. Workers are involved in identifying hazards, not just informed about them after the fact.
- ☐ 3. Employees participate in safety committees or have a real voice in program design.
- ☐ 4. Near-misses are reported and reviewed, not swept under the rug.
- ☐ 5. Frontline workers help develop or review safety procedures for their own tasks.
- ☐ 6. There is a system for anonymous safety feedback, and people actually trust it.
- ☐ 7. New hires receive safety onboarding that goes beyond a signature on a form.
- ☐ 8. Employees know who to contact with a safety concern, and that person is reachable.

SCORE

/ 8

SECTION 3: FIND AND FIX HAZARDS (8 POINTS POSSIBLE)

Spotting a hazard is only half the job. This section checks whether they actually get fixed.

- ☐ 1. Regular workplace inspections are scheduled and consistently completed, not just done "when there's time."
- ☐ 2. There is a documented process for correcting hazards once they're identified.
- ☐ 3. Hazard corrections are tracked to completion, with clear ownership and deadlines.
- ☐ 4. Root cause analysis is performed after incidents, not just a quick patch and move on.
- ☐ 5. Where appropriate, current Job Hazard Analyses (JHAs), JSAs, or equivalent task-hazard analyses are used for higher-risk and nonroutine work.
- ☐ 6. Equipment and machinery are inspected on a defined maintenance schedule.
- ☐ 7. Employees receive updated training when a new hazard or process is introduced.
- ☐ 8. Historical incident and near-miss data is used to guide future prevention efforts.

SCORE

/ 8

YOUR
TOTAL SCORE

_____/25

SCORE INTERPRETATION:

21-25
Safe + Sound.

Your program is doing the heavy lifting OSHA had in mind. Keep sharpening the details.

15-20
Solid bones, soft spots.

You've got a real program, but at least one pillar needs reinforcement before it becomes a real gap.

8-14
Foundational at best.

The building blocks exist, but participation, follow-through, or leadership buy-in likely need real investment.

Below 8
Time to rebuild.

Time to take a hard look. The fundamentals may need significant investment in leadership commitment, worker participation, or hazard management. This is a good moment to bring in outside support.

This scorecard is structured around OSHA's Safe + Sound Week framework and its three core elements: Management Leadership, Worker Participation, and Find and Fix Hazards. Learn more at [osha.gov/safeandsoundweek](https://www.osha.gov/safeandsoundweek).
